

Ask Your Doctor: Is Protiva Pregnancy Right For Me?

Protein is an important nutritional component for pregnant women. Protiva Pregnancy can help you maintain normal protein levels throughout your pregnancy. We encourage you to have a discussion with your doctor about your protein levels and whether Protiva is right for you and your baby. Here's what you and your doctor need to know.

What is Protiva Pregnancy?

Protiva Pregnancy is a clinically proven all-natural protein supplement for pregnant women that provides 15 grams of protein in a daily drink. It contains no preservatives or artificial colors, flavors or sweeteners. Protiva is lactose-free, gluten-free, and soy-free and is non-GMO. Protiva Pregnancy has been formulated to work with any prenatal vitamin regimen.

Why Protiva Pregnancy?

Many women have a hard time getting the extra protein needed during pregnancy through diet alone. In our clinical study, blood levels drawn in the third trimester showed 85% of women were below or at the bottom of a normal protein level. Protiva Pregnancy was designed to make it easier for pregnant women to reach the additional 25 grams of protein needed each day in their second and third trimesters.

What testing has been done on Protiva Pregnancy?

Protiva underwent a full IRB-approved multisite clinical trial of women during pregnancy with control patients. After taking Protiva, protein levels improved to normal range in 100% of the women tested. The full study results will be published in the second quarter of 2016.

When should Protiva Pregnancy be taken?

We recommend one serving a day of Protiva Pregnancy after week 18 of pregnancy. Women may increase to two servings a day starting in weeks 34-36 if they have difficulty eating.
